To Whom It May Concern:

I am writing to express my strong interest in the AI Engineering Intern position at MDI. As a rising junior at the University of Central Florida, I have developed a technical foundation in Python and LLM frameworks that aligns with your goal of creating measurable operational leverage through AI. I am eager to apply my skills in automation and documentation to help MDI reduce manual labor and improve workflow speed across your insurance and risk management platforms.

My qualifications for this role are rooted in my experience building functional software. During my time as a web developer at Dell'Oro Company, I was responsible for bug fixing small tasks in a backend CMS. By integrating Python scripts into their existing CRM, I reduced manual processing time by 20%. This experience taught me how to develop structured workflows and test for reliability, which are skills that will allow me to successfully deploy AI agents for customer support triage and insurance document analysis at MDI.

Additionally, my background in machine learning has prepared me to serve as an internal AI Subject Matter Expert. For instance, while working on a Hazard AI Simulator at UCF, I designed and delivered training sessions for fifteen non-technical team members on how to utilize new software interfaces. At MDI, I can transfer this experience by not only building LLM-based tools but also establishing the best practices and training documentation necessary for your sales and operations teams to adopt these new AI workflows effectively.

I am confident that my "build-and-ship" mindset and technical proficiency make me an excellent fit for your executive-facing team. I would welcome the opportunity to discuss my portfolio and how I can contribute to MDI's summer AI initiatives. Please feel free to contact me at 407-701-0081 or je845754@ucf.edu to schedule an interview.

Sincerely,

Jessie Yeung
